

Baron Machine Company Achieves Registration To The Aerospace Standard (AS9100)

Baron Machine Company, with more than 50 years experience in custom manufacturing, announced that its Quality Management System has achieved AS9100B registration by National Quality Assurance USA, Inc. of Acton, MA.

AS9100B is an internationally recognized aerospace quality system standard awarded to companies dedicated to providing excellent customer service and outstanding product quality.

After extensive research, including their current customer base and potential new markets, AS9100 was selected as the International Standard to use as their guide. Baron Machine hopes that customers from all industries will recognize that by this effort, the Baron Management Team is putting quality at the forefront while continuing to provide competitive pricing and first class delivery to all customers.

Baron Machine, using a wide range of metal and plastic materials, specializes in machining, welding, fabrications and assemblies for the commercial, medical and aerospace industries.
